

Carbotech Gas Systems GmbH was founded from Bergbau-Forschung GmbH. That is why we can look back on more than 60 years of experience in developing, engineering, and manufacturing gas processing and gas generation plants. Carbotech Gas Systems GmbH is the specialist for industrial gas purification and gas production of various biogenic and technical gases.

With innovative technologies, we make an active contribution to CO<sub>2</sub> neutral energy generation. The pressure swing absorption process (PSA) developed and patented by Carbotech is simple and convinces by its low energy consumption. Due to the continuous further development of the plants over the past three decades, the DWA is now one of the most efficient treatment processes on the market. Carbotech plants have been in operation worldwide for many years.

## NEW ENERGY FOR YOUR CAREER!

We look forward to receiving your complete application documents, including your salary expectations and the next possible starting date.

### Tasks >>>

- Independent management, coordination, and supervision of the construction of technically complex systems domestically and abroad
- Care and supervision of assembly and commissioning processes as well as material, vehicle, and equipment disposition at the construction site
- Daily planning at the construction site, documentation, and reporting (preparation of assembly, commissioning, and error reports)
- Monitoring and adherence to the schedule, execution quality, and occupational safety management
- Technical coordination with responsible project managers
- Technical contact person for customer inquiries, customer care, and conducting user training
- Proposals for problem-solving and corrections of deviations
- Leadership and coordination of assembly, external, and customer personnel
- Personnel deployment planning
- Inspection and verification of the permits for operating construction site machinery by personnel

### Qualification and competences >>>

- Completed degree in mechanical engineering or completed training as an industrial mechanic [all gender], mechatronics technician [all gender], or a comparable qualification in the field of mechanical and plant engineering
- Several years of professional experience as a construction manager [all gender] or deputy construction manager [all gender] in plant construction
- Good technical understanding and confident handling of construction and manufacturing drawings
- Willingness to travel worldwide
- Good knowledge of English
- Knowledge of MS Office
- Strong communication skills, customer orientation, and negotiating skills
- Strong organizational and time management skills
- Convincing, assertive demeanor and high results orientation
- Self-responsibility and decision-making ability
- High level of commitment and resilience

### We offer >>>

- Mobile Working | Homeoffice
- Flexible working hours | Flexitime
- Flat hierarchies
- Individual development opportunities
- Company pension scheme
- Accessibility
- Parking space
- Convenient connection
- Smartphone
